## 2. Signs and Markers

The permit entry sign near the gate along the main mine road requires replacing. The sign is no longer readable because of shot gun holes. The new sign should be placed along the road at the cattle guard which is the point of entry to the permit area.

## 4. Hydrologic Balance

**a. Diversions** - The diversion collecting road runoff below the gate needs to be reestablished. No surface drainage map for the facilities area could be found in the permit. Plate 3-8, Surface Drainage Map (sheet 1 of 2) appears to be missing from the permit.

**c. Other Sediment Control Measures** - Berms around the recently demolished pump house need to be improved.

## 8. Noncoal waste

A general clean-up of the site is required. Noncoal waste was observed within the permit and disturbed area from removal of the waterlines and electric lines. The trash below the tippie pad around the half round culvert had not been cleaned. Mr. Oakley stated they couldn't access the trash because the snow had just melted on this steep slope.

## 18. Support Facilities/Utility Installations

The water and electric lines have mostly been removed. Several poles and insulation from the water line still needs to be removed.
